"Catching Cold."

that are produced by taking cold. So that if a cold taken and effecting not avert. We may control the air cells. lesser ills ariving from catching cold, but cannot always limit the taking cold, we protect ourselves by saverity of many reladice there in severity of many maladies they in- sufficient clothing, by inhaling pure in the various election districts will troduce.

course do what one may. We ture, but by vicissitudes of tempernever know at the outset of many ature. The result of catching cold maladies exactly what that course everybody has more or less experi-Heat is the positive condition and tightness in the nose and forehead, cold a negative, Catching cold then the usual sneezings the watery eyes, is losing heat. Exposure to a cold the tickling of the throat, and feeltemperature removes heat from the ing of laziness and discomfort-and body in which it has been made, then after a few days have passed Our clothing is not warm; it gener- away an uneasiness and tightness ates no heat, but simply retains the in the chest, hoarseness and irritaheat the body generates. As cold re- tion about the larynx-all these move the heat, the arteries, veins and and other indications of having tacapillaries shrink and are no longer able to convey the vital fluid on its wonted rounds. Body heat is gen- of having taken cold are not removerated by the oxygen we inhale ed, the pulse becom s quick, the and absorb combing with the waste skin is dry and a general feeling of The Culverwell Medical Co., deposited in every section of the uneasiness is telt; and the sufferer body. The arteries convey the begins to wonder how the complaint blood to every tissue and deposit will end. Cold in the nasal cavithe heat it needs. Cold checks the ties or coraza, distress in the normal flowing of the blood through head, inflamation in the throat may the outer surface of the boby and slowly or rapidly succeed each othaugments it in the inner organs, er. And as the oxygen is continually At the outset of the malady the

for healthy action.

the heat actually generated. The skin is full of minute tubes. Every flammation of the lungs and pleura skin is full of minute tubes. Every may appear. square inch contains 2,800 open ings, the apertures of glands. The entire surface of the body contains 7,000,000 apertures, or nearly twenty-eight miles of tubing for draining purposes. They yield two pints of fluid a day even when no still meaner. moisture is perceived. If bodily exercise be excessive, the amount of perspiration is much increased. At this point if exposed to cold the skin contracts so as to resemble goose skin, the pores are closed and perspiration is stopped at once.

The mucous membrane, the moist, red lining of the mouth and inner tubing of the body, also has glands that secrete mucous, that Inbricate its inner surface. Observation shows that whatever affects the onter shin also affects the mucous membrane or inner skin. The 82 60 per Annum, 25 cts per same cause that starts persparation also induces a secretion of mucous upon the mucous membrane.

The nose is divided by a septum that saparates the right nostril from the lett: these two parts are nearly equal. The left may be very lit the smaller than the right. The outer wall of each cavity consists of same high literary standard as in the past, but equal. The left may be very lit mucous membrane, and fits it for coming in contact with the surfaces of the bronchial tubes. The nasal civities are connected with spaces in front of the skull and behind the cheek bones. The spaces become disturbed after taking cold. The LIGHT AND ATTRACTIVE READ. brow-headache shows that congestion exists in the frontal sinues or cavaties behind the eyebrows. The pain behind the cheek bones shows that congestion exist in those cavities. The same mucous membrane extends through the nasal ducts from each eye and their covering from each eye and their covering the same of their covering the same covering to the same covering the same covering to the same covering the same covering to the same covering trom each eye and their covering and inner surfaces of the lids. Other tubes pass from the sides of the palate into the drum or middle ess.
